

**NAME**

cmd -- analyze syntax of SCC command line

**SYNOPSIS**

```
cmd(cmdstr, ptrlst) char *cmdstr; char **ptrlst;
```

**DESCRIPTION**

The input to cmd is the sccsh command line pointed to by cmdstr, and the output is a list of pointers, ptrlst, to each argument in the command string. How cmd parses any given command is easily tested by the utility args(1L).

**LIBRARY**

/lib/lib1.a
