NAME

       crcbuf -- get CRC16 checksum

SYNOPSIS

       unsigned crcbuf(bufp, nchar, oldcrc)
       char *buff;
       unsigned nchar, oldcrc;

DESCRIPTION

       Crcbuf returns the CRC16 checksum of the nchar characters pointed
       to by bufp. Oldcrc represents the checksum of some other array of
       characters which should be taken into account in the calculation
       of the checksum for these characters. Oldcrc should be 0 if no
       such array exists.

LIBRARY

       /lib/lib1.a
