NAME

updfs -- update FS file

SYNOPSIS

#include <chl.h>

updfs(value, chlhdr)
int value;
struct CHLHDR *chlhdr;

DESCRIPTION

This routine updates the FS file by setting the alerting bit to
the value passed in value. This is done only if logging is ac-
tive on the channel. chlhdr is a pointer to the CHLHDR structure
defined in /usr/include/chl.h.

Return values:

        -1 if system error
         0 otherwise

FILES

/sccetc/fs

LIBRARY

/lib/lib1.a
